DEGREE – Future of Green & Digital Education

DEGREE is an Erasmus+ project that brings together educators, researchers, SMEs, and learners across Europe to rethink how we teach and learn entrepreneurship. Our goal? To build a new generation of learning experiences that are green, future-proof, and digitally innovative.

To make this happen, the project follows a simple and powerful path:

BUILD -> IMPLEMENT -> LEARN

BUILD – CREATING THE FOUNDATION (WORK PACKAGE 2)

We start by empowering the people at the heart of entrepreneurship education: educators and SME experts.

What we develop:

- **Train-the-Trainer Programme**
A hands-on, activity-based training where participants design their own entrepreneurship courses tailored to real contexts.
- **Impact Measurement Tools**
Practical instruments to understand how the training affects both teachers and students.
- **Communities of Practice**
Local and European networks that support collaboration, co-creation, and long-term innovation in entrepreneurship education.

IMPLEMENT – BRINGING IDEAS TO LIFE (WORK PACKAGE 3)

Next, trainees turn their knowledge into action by designing and delivering real-world entrepreneurship courses.

Key elements:

- Courses focus on green, resilient, and digital skills.
- Students in higher education, vocational training, and MSMEs participate in authentic learning environments.
- Communities of Practice provide feedback and support throughout the process.
- In the Netherlands, a group of learners will even earn micro-credentials for their demonstrated skills—developed with labour market partners.

LEARN – GROWING THROUGH SHARED INSIGHTS (WORK PACKAGE 4)

Learning doesn't stop once the courses are delivered. We continuously collect and analyse data to help trainees refine their teaching and better support learners.

How we learn:

- Researchers and trainees analyse results from innovative tools.
- Local Communities of Practice share lessons learned and identify what works best.
- Countries come together to compare insights and develop recommendations for future entrepreneurship education across Europe.

The result? A continuous learning cycle that strengthens teaching practices and student outcomes

DEGREE AT A GLANCE

A European partnership building stronger entrepreneurship education, one step at a time.

Through **BUILD -> IMPLEMENT -> LEARN**, we create a lasting impact on educators, learners, and communities across Europe.

COMMUNICATE – SHARING OUR STORY (WORK PACKAGE 5)

To ensure all results reach the people who can benefit most, DEGREE runs a clear and strategic communication plan.

What this includes:

- Regular newsletters, website updates, and social media outreach.
- Clear branding and visibility following EU and Erasmus+ guidelines.
- A long-term strategy so that outcomes continue to inspire educators and labour market partners beyond the project's lifespan.

DEGREE is created in partnership with:
